## Homework \#30 - Proportional Graphs, Tables and Equations

1) The table below shows the number of people picking strawberries in a field and the number of strawberries they picked.

Part A) Graph the relationship on the grid below.

| Number <br> of hours <br> spent | Number of <br> people <br> picking <br> strawberries |
| :---: | :---: |
| 1 | 3 |
| 3 | 9 |
| 4 | 12 |

Part B) Is the relationship proportional? Why or why not?

Part C) If proportional, determine the constant of proportionality. Show all work.

Part D) What does the unit rate mean in the context of the situation?

Part E) Write the equation of the relationship shown above. $\qquad$

Part F) Using your equation from part D, determine the number of hours you would need to pick strawberries in order to pick 21 strawberries. Show all work.

Example 6) The rate at which Richard types (words per minute) is represented by the graph below.

Part A) What is Richard's typing speed in words per minute? Show all work.

The rate at which Nicole types is represented by the table below.

| Time (min.) <br> $(x)$ | 2 | 4 | 6 | 8 |
| :--- | :--- | :--- | :--- | :--- |
| Words $(y)$ | 168 | 336 | 504 | 672 |

Part B) What is the constant of proportionality in the table above?

Part C) Write an equation that represents the rate at which Nicole types. $\qquad$

Part D) Who types faster? Why?
